CALENDAR YEAR 1962

IMPORTS OF URANIUM, EXCEPT ORE AND CONCENTRATES, THORIUM, AND RELATED COMMODITIES (EXCLUDED FROM IMPORT STATISTICS) 1954 THROUGH 1960

It was announced in the January 1961 issue of this report that data on imports of uranium, thorium, and related commodities, which were formerly withheld for security reasons, would be released in the regularly published statistics beginning with January 1961. It was also announced that data previously excluded from the import statistics in prior years would be released at a later date.

A special notice in the 1961 calendar year edition of FT 110 included corrected monthly figures for 1961, in addition to prior years statistics, for imports of uranium ore and concentrates reported under Schedule A number 6270 700.

The following tables cover all previously unpublished data which were withheld for the years 1954 through 1960. For additional information concerning the publication of commodity and country of origin detail, see the January 1961 announcement.

CHANGES IN COUNTRY DESIGNATIONS USED IN COMPILING FOREIGN TRADE STATISTICS

Effective with the statistics for July 1962, changes were made in the Schedule C country designations for certain Asian countries. Following is a list showing these changes:

1. The country designation Portuguese Asia, n.e.c., was deleted.
2. The country designation Goa, Damao, and Diu was established.
3. The country designation Southern and Southeastern Asia, n.e.c., included Portuguese Timor.

As a result of these changes in country designations, the data shown in this report for Portuguese Asia, n.e.c., cover the period January-June 1962 only; the data shown for Goa, Damao and Diu cover the period July-December 1962 only; and the data shown for Southern and Southeastern Asia, n.e.c., include figures for Portuguese Timor during the period July-December 1962.

REVISIONS IN SCHEDULE A COMMODITY NUMBERS DURING 1962

During 1962, a number of changes were made in Schedule A commodity classifications. As a result, some Schedule A classifications were in effect for only a part of the year. The statistics shown for such commodity numbers cover only the period for which the classification was in existence and, therefore, do not represent calendar year totals. The following table lists the Schedule A commodity numbers which changed during the year (provided that there were transactions reported for the classification during 1962) and shows the periods during which the classifications were in effect. This list also shows Schedule A numbers for which changes in units of quantity were made during the year. For these classifications, net quantity information is not presented in this annual report but it does appear in monthly reports in terms of the unit which was in effect during the given months.

GENERAL EXPLANATION

COVERAGE

Types of Shipments Included

The import statistics include government as well as non-government shipments of merchandise from foreign countries to the United States. However, American goods returned by the United States armed forces for their own use are excluded. Shipments into the United States from Puerto Rico and from the United States territories and possessions and shipments between the territories and possessions and between Puerto Rico and the territories and possessions are not reported as United States imports, but imports into Puerto Rico from foreign countries are considered to be United States imports and are included in this report. Merchandise shipped under Customs custody through the United States in transit from one foreign country to another is not reported as imports. In general, the import statistics are a complete record of the physical movement of merchandise into the United States from foreign countries (except for intransit shipments), but there are some exclusions of items of relatively small importance in terms of total value, such as personal and household effects.

Imports for consumption shown in this report consist of merchandise entered into United States consumption channels, i.e., merchandise released from Customs custody immediately upon arrival, merchandise entered into bonded manufacturing warehouses (other than smelting and refining warehouses), merchandise withdrawn from bonded storage warehouse for release into domestic consumption channels, and imported ores and crude metals which have been processed in bonded smelting warehouse.

Monthly and Annual Coverage

It is the objective of the compiling procedures, insofar as practical, to include shipments in the imports for consumption statistics for the month of import which, in general, is based on the date of filing of the consumption entry or warehouse withdrawal document.[1] However, because of processing problems, there has always been a carry-over of a small percentage of items from the proper month to a subsequent month (usually the month immediately following). The amount of this carry-over was increased a few years ago in order to take advantage of early release dates made possible with the use of electronic equipment. Normally, the amount of the carry-over from month to month (and from year to year) remains substantially constant. For individual commodities, however, the carry-over procedure as a whole may result in the inclusion in the 1962 statistics of some shipments made in 1961, and/or the exclusion from 1962 statistics of some 1962 shipments which will be included in the statistics for 1963.

RELATED INFORMATION

Information is also compiled for general imports, which represent total arrivals of imported goods (except for intransit shipments), i.e., merchandise released from Customs custody immediately upon arrival plus merchandise entered into bonded storage warehouse, bonded manufacturing warehouse, and bonded smelting and refining warehouse immediately upon arrival. General import figures covering total trade, country totals and Customs district totals are published monthly. General import commodity statistics are not published but are available for reference purposes.

Trade between the United States, Puerto Rico and United States possessions (not included as United States imports) is presented separately in Report No. FT 800. Statistics on the movement of intransit merchandise arriving at or leaving the United States by vessel (not included in this report) are also compiled and presented in summary form in Report No. FT 985. In addition, transportation statistics (showing shipping weight as well as value information) are compiled covering that part of general imports of merchandise which arrives by vessel. Summary vessel transportation statistics for both imports and exports are presented in Report No. FT 985. Effective with statistics for January 1962, information is being compiled on United States general imports of merchandise by air. These data are published in Reports FT 380, FT 390 and FT 986. A more complete description of the coverage and presentation of the various types of statistics mentioned above will be found in the introductions to the specified reports.

SOURCE OF INFORMATION

The source of information for all of the imports included in this report is the import entry and warehouse withdrawal forms which importers are required to file with Collectors of Customs. Effective January 1, 1962, statistical factors of country of origin, net quantity, value, and commodity classification are verified or corrected as necessary by Customs examiners on all formal consumption and warehouse entries.[2] This verification of statistical data is made at the time the examiner reviews invoices and samples of merchandise for duty and other Customs purposes, and the statistical copy of the entry is corrected by the examiner at that time if he finds that it does not accurately reflect the information called for by the statistical requirements. Information on warehouse withdrawals, which account for approximately 10 percent of the total value of imports for consumption, while not subject to the examiner verification procedure directly, should be improved indirectly (due to "education" of importers/brokers) by the verification of the warehouse entries to which they correspond.

VALUATION

The dollar value shown in the import statistics is defined generally as the market value in the foreign country, excluding the United States import duties, ocean freight and marine insurance.

---

[1] For shipments by vessel, merchandise is not included in the statistics prior to the date of formal entrance of the vessel (i.e., the date of the inward Customs manifest for the vessel).

[2] For information on the effects of examiner verification, see the article entitled "Level of Accuracy in Import Statistics" in the October 1961 issue of this report.

COMMODITY INFORMATION

Commodity information is summarized according to the classifications established in Schedule A, Statistical Classification of Commodities Imported into the United States, and is presented in the order of the numbered classifications in that Schedule. The Imports of Merchandise for Consumption by Subgroup table on page 7 of this report indicates the range of Schedule A commodity numbers covering related subgroups of commodities and will assist in locating in the report the statistics for particular commodities. For precise definition of the individual commodity classifications for which figures are presented, reference should be made to Schedule A. The commodity descriptions in this report are necessarily abbreviated to save printing costs and therefore, in many cases, they do not contain all of the qualifying information necessary to define clearly the commodity for which statistics are shown.

During 1962, a number of changes were made in Schedule A commodity classifications. As a result, some Schedule A classifications were in effect for only a part of the year. The statistics shown for such commodity numbers cover only the period for which the classification was in existence and, therefore, do not represent calendar year totals. These classifications are footnoted in this report. The article beginning on page of this report lists the Schedule A commodity numbers which changed during the year (provided that there were transactions reported for the classification during 1962) and shows the periods during which the classifications were in effect. This list also shows Schedule A numbers for which changes in units of quantity were made during the year. For these classifications, net quantity information is not presented in this annual report but it does appear in monthly reports in terms of the unit which was in effect during the given months.

Except for commodity number 9999 500, the Schedule A commodity classifications in this report exclude information on imports valued under $100 reported on formal immediate consumption entries and information on imports reported on informal entries. (Informal entries, by definition, contain only items valued not more than $250.) It follows that the import statistics for individual commodities are undercounted to the extent that shipments of the commodity are made in lots which are excluded from the commodity statistics under this policy. The total value so excluded amounts to about one percent of the monthly import total. Value estimates based on a one-percent sample of these "low-valued" shipments are included in the over-all import totals and in the group 9 total in this report. The estimates are also included in the totals for individual countries and in the totals for economic class as published in Reports FT 950 and FT 930.[3]

[3]See Report No. FT 930-I for the handling of the low-value estimates in the import reports by economic class, and Report No. FT 970-I for the handling in the reports by Customs District.

The estimates are shown by country, under commodity number 9999 500 in this report. Although subject to considerable sampling variability,[4] particularly where the estimated amounts are relatively small, these estimates may be of some interest as a rough guide to the general magnitude of the effect which the exclusion of the items has on the commodity data for individual countries.

As of possible further assistance in estimating the effect of this handling of small shipments, studies have shown that the undercounting for any individual commodity subgroup total is probably no more than about five percent except for the subgroups covering "Leather, rawhide and parchment manufactures;" "Fodders and feeds, n.e.s.;" "Scientific and professional instruments, apparatus and supplies, n.e.s.;" "Books, maps, pictures, and other printed matter, n.e.s.;" all of which may be understated by about 10 to 15 percent. (Estimated commodity data for the small shipments in 1957 are shown in a supplement to calendar year 1958 Report No. FT-110.) It is estimated that commodity group totals are undercounted by no more than about two percent. The inclusion of the estimated value for low value shipments in group 9 results in overstating the value of imports for that group by about 10-15 percent. The handling of low-valued imports described above has been in effect in the import statistics since January 1958.

Descriptions of the special handling of low-valued shipments in effect prior to that date are carried in the then-current publications. These may be referred to in making comparisons of earlier figures with data for 1958 on. The January 1958 through December 1961 issues of this report contain a discussion of the effect on statistics of the changes made in January 1958 in the handling of low-valued shipments, and a brief summary of the handling in earlier periods.

Effective January 1960, the initial reporting of imports is in terms of the 8-digit commodity classifications contained in United States Import Duties Annotated for Statistical Reporting. This publication presents the statistical reporting requirements as well as the tariff requirements in one volume in arrangement of the tariff paragraphs. The U.S.I.D. Annotated attempts to minimize the difficulty of cross-classification between the tarrif and statistical reporting requirements.

[4]The estimated total for low-valued imports reported under Schedule A commodity number 9999 500 is subject to a sampling variability of 3 to 4 percent. This means that the chances are 2 out of 3 that a complete tabulation would have resulted in a figure that differed from the estimate by no more than 3 to 4 percent. The estimates by country under commodity number 9999 500 are subject to greater sampling variability - around 10 percent for countries with about 200 low-valued shipments in the sample; around 20 percent for countries with about 75 shipments in the sample; and over 20 percent for smaller sample sizes. For more detailed indications of the effect of sampling on the estimates for low-valued imports by country see the "Explanation" in front of Report No. FT 120, U.S. Imports of Merchandise for Consumption, Country of Origin by Sub-group.

For technical reasons, Schedule A commodity classifications which have been established to provide for the reporting of quantity data only are being excluded from all monthly tabulations and publications beginning with the March 1958 data. (These commodity classifications should not be confused with those which provide for the reporting of the dollar value of imports and two units of quantity under the same Schedule A commodity classification number. Both units of quantity for such classifications will continue to be published.) Data for these quantity only commodity classifications being excluded from the statistics are being compiled as supplementary information which is available from the Bureau of the Census, Washington 25, D. C. It may be necessary to make a small charge for the transcription of this information in the form of a special report for release to interested parties. Reference copies of the supplemental information are available in the New York Office, Economic Operations Division, Bureau of the Census, Room 434, Customhouse, New York, New York.

COUNTRY OF ORIGIN

The country reported in the statistics as the country of origin is defined as the country where the merchandise was grown, mined, or manufactured. In instances where it is known that the country of origin cannot be determined, the country of shipment is shown and footnoted in this report.

The geographic definitions of countries reported are shown in Schedule C, Classification of Country Designations Used in Compiling the United States Foreign Trade Statistics. Country names which are abbreviated in this report to save space are shown in full in Schedule C, together with descriptions of the countries, adjacent provinces, territories, islands, or other areas considered a part of the country for statistical purposes. Schedule C is published as a part of Schedule A (see "Commodity Information" above). A separate edition of Schedule C is also available free upon request to the Bureau of the Census.

Countries are listed for each commodity in this report according to continents, in sequence within each continent from north to south and west to east, in accordance with Schedule C. The omission of a country name from the data for a Schedule A commodity number indicates no imports of that commodity from that country valued at $100 or more reported on formal entries.

More precise information on a commodity by country basis is presented in this calendar year report than can be obtained by cumulating the data in the monthly reports. In the monthly issues of this report, for each Schedule A commodity classification, information for individual countries is shown only where the total for imports of the commodity from the country amounts to $10,000 or more. To save printing costs in the monthly reports, the data (if any) for countries with totals of less than $10,000 are combined for each commodity and shown as a total, identified as OTH CTY, at the end of the list of countries for the commodity. In this calendar year report, however, there is no basketizing of country totals and separate information is presented for each country from which imports of the commodity were reported in the statistics for the period covered by this calendar year report. As a result of this difference between the presentation in the monthly issues and the calendar year issue of this report, some commodity by country items which did not appear in the monthly reports may appear in the calendar year statistics.

Effective with the statistics for July 1962, changes in country designations were made as follows:

a. The country designation "Goa, Damao and Diu" was established; figures shown are for July-December 1962 only.

b. The country designation "Portuguese Asia, n.e.c." was deleted; figures shown are for January-June 1962 only.

c. Statistics for "Southern and Southeastern Asia, n.e.c." include data on imports from Portuguese Timor during July-December 1962; imports from Portuguese Timor during January-June 1962 are included in the statistics for "Portuguese Asia, n.e.c.".

SOURCES OF FURTHER INFORMATION ABOUT IMPORT STATISTICS

A complete discussion of the compilation procedures and coverage for import statistics will be found in the Foreword to the latest edition of Foreign Commerce and Navigation of the United States. (Copies are available for reference at public libraries.) Prior to September 1960, regular subscribers to FT reports were automatically supplied with copies of Foreign Trade Statistics Notes, a monthly publication containing information of value to users of foreign trade statistics (such as, changes in type of shipments covered by current statistics, unusual shipments, problems of valuation, classification, etc.). Effective January 1961, this information on imports is included in the monthly issues of this report. A catalog of United States Foreign Trade Statistical Publications is also available. Data in this report are available for reference purposes prior to the publication of the report or may be obtained in advance of publication on payment of the cost for a special report. Reports providing additional detail compiled but not published can be obtained on a cost basis. For free copies of the catalog or for further information regarding reference copies of tabulations or the availability of special reports, request should be made to the Bureau of the Census.

IMPORTS OF MERCHANDISE FOR CONSUMPTION, BY SUBGROUP

(The commodity group and subgroup figures shown in this table may not be comparable with figures for periods prior to 1960 because of certain revisions in coverage and for periods prior to 1958 because of certain changes in sampling procedures and presentation of low value shipments. See page 6A of the January 1960 issue of this report for information on revised coverage; see page 4 of this report for explanation of sampling procedure.)

IMPORTS OF MERCHANDISE FOR CONSUMPTION, BY SUBGROUP--Continued

(The commodity group and subgroup figures shown in this table may not be comparable with figures for periods prior to 1960 because of certain revisions in coverage and for periods prior to 1958 because of certain changes in sampling procedures and presentation of low value shipments. See page 6A of the January 1960 issue of this report for information on revised coverage; see page 4 of this report for explanation of sampling procedure.)
